

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million. The number of people who are malnourished has increased from 1.1 billion to 1.5 billion. The number of people who are obese has increased from 100 million to 300 million.

There is a growing awareness of the need to address the problem of malnutrition. The World Health Organization (WHO) has launched a global strategy to reduce malnutrition. The strategy is based on three pillars: (1) improving the quality of food, (2) increasing the availability of food, and (3) improving the access to food. The WHO is working with governments and other organizations to implement this strategy.

There are many reasons why malnutrition is a problem. One reason is that food is often of poor quality. Another reason is that food is often not available in sufficient quantities. A third reason is that people often do not have access to food. There are many ways to address these problems. One way is to improve the quality of food. Another way is to increase the availability of food. A third way is to improve the access to food.

There are many ways to improve the quality of food. One way is to use better farming practices. Another way is to use better food processing techniques. A third way is to use better food storage techniques. There are many ways to increase the availability of food. One way is to produce more food. Another way is to distribute food more evenly. A third way is to reduce food waste.

There are many ways to improve the access to food. One way is to build roads and bridges. Another way is to build schools and health centers. A third way is to build markets and distribution networks. There are many ways to address the problem of malnutrition. It is important to find the right combination of these ways for each country.
